

MAX Tracker

Get quick and easy access to the MAX route information, including stop locations, operation times, and arrival time based on current location.

Installing

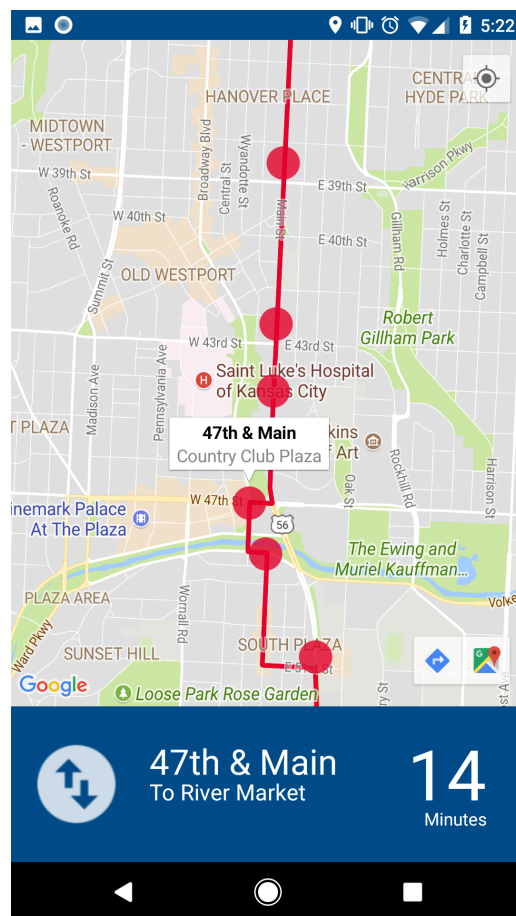

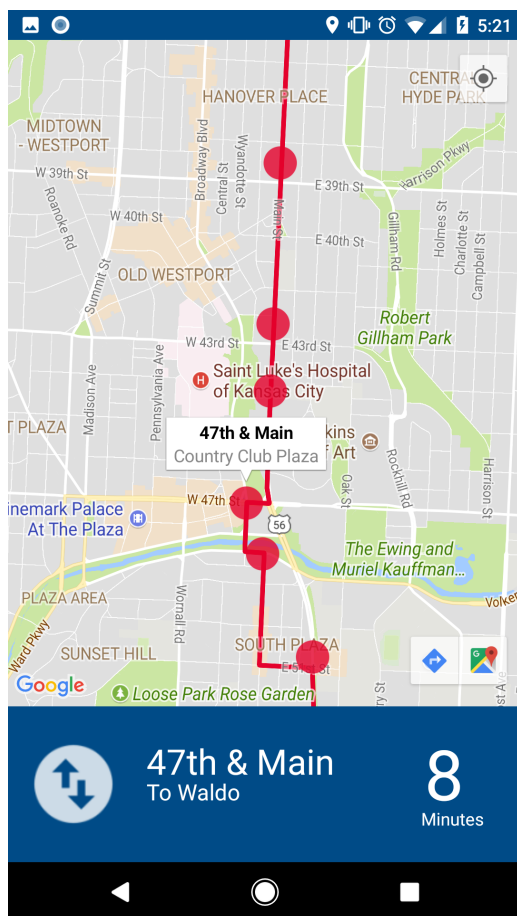

MAX Tracker requires Android 4.0.3 Ice Cream Sandwich and access to location services

Clone the Repository

<https://github.com/stoecklein/MAXTracker.git>

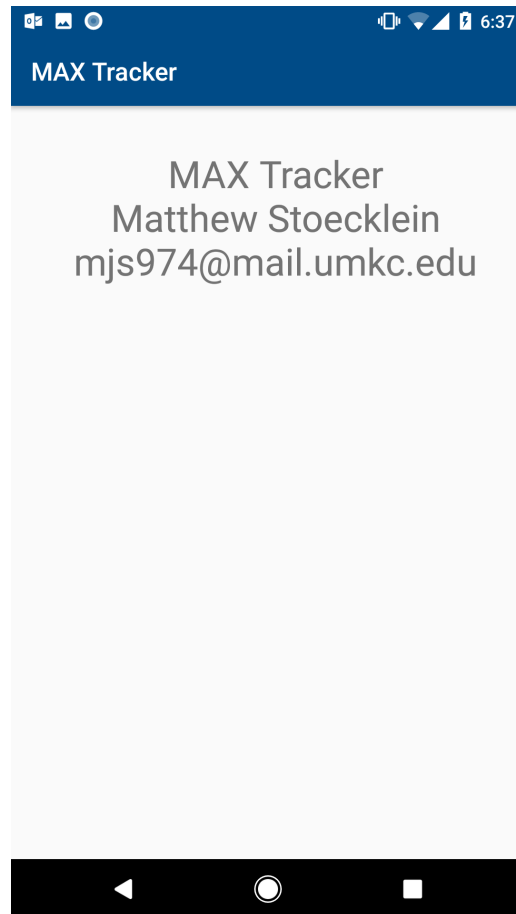

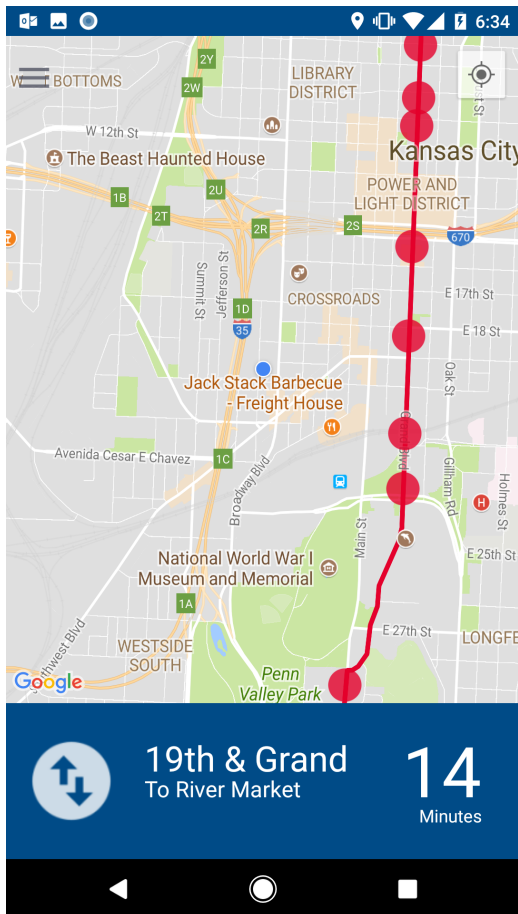

Open and Run Project in Android Studio

Using

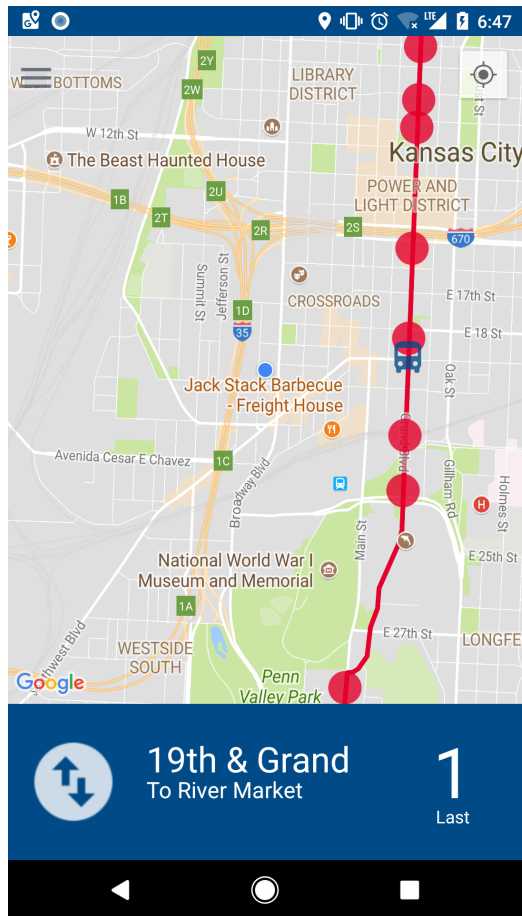

MAX Tracker opens displaying your current location relative to the MAX route.

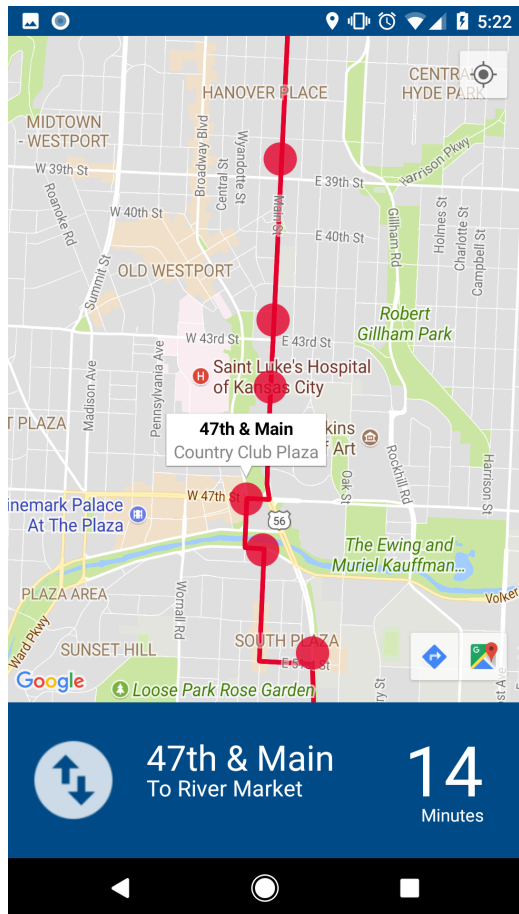

- Entire MAX route displayed on an interactive map
- Text displays intersection to closest bus stop relative to current location and direction bus is going
- Number displays time remaining in relation to the closest stop
- Direction button on the left switches the bus direction and updates the time
- Crosshair button relocates the user's current location

- Menu button opens the about page

- If oncoming bus is the last for the day, "last" will display under the time remaining
- Time only displayed if the MAX bus is in operation

- All MAX stops shown on the map
- Clicking on a stop displays intersection data and stop name
- Clicking on a stop, and then the Google maps icon will give you navigation directions within Google Maps
